

Statistics for the SDGs - indicators for national priorities

Name of the indicator	2.3.a Share of income from hired work and self-employment in income of private agricultural farms outside agricultural holding in individual use
Sustainable Development Goal	Goal 2. Zero hunger
Priority	Improvement of the income situation of rural households in relation to the urban area, including by increasing the diversification of income sources of rural residents
Definition	Ratio of total incomes of rural households from hired work and from self-employment to the available income of those households.
Unit	percent [%]
Available dimensions	total
Methodological explanations	<p>The indicator is calculated on a basis of information obtained from household budget survey.</p> <p>The household budget survey is conducted using representative method based on random sample which allows generalisation, within a margin of an error, of the results for all households in the country. The monthly rotation of households implemented since 1993 assumes that every month of the year a different group of households participates in the survey.</p> <p>The survey covers one-person and multi-person households. Households of foreign citizens with permanent or long-lasting residence in Poland and using Polish language also take part in the survey. The purpose of the survey is to enable the analysis of the living standards of the population as well as evaluate the impact of various factors on the living standard and its diversity among basic groups of households.</p> <p>Household budget survey provides detailed information on:</p> <ul style="list-style-type: none"> • the level and the structure of expenditures, sources of acquiring goods and services; • the consumption level of basic food products according to quantity, but also energetic value and nutrients; • prices at which households purchase selected goods and services; • the level and sources of their incomes; • household equipment with durables; • dwelling conditions; • subjective evaluation of the material condition of households; • demographic and social structure of the households i.e. on the number, age, gender, education, disability and economic activity of the members of the surveyed household. <p>The survey unit is a household, which is understood as the persons who may be related or unrelated, living together and maintaining themselves jointly (multi-person household). Household can also be formed by one individual maintaining himself/herself independently, regardless of whether the individual lives alone or with other persons (one-person household).</p> <p>Disposable income is designated for consumer goods and services expenditures and for savings increase. Disposable income is available income less other expenditures.</p> <p>Available income is designated for expenditure and savings increase. It is a sum of</p>

Statistics for the SDGs - indicators for national priorities

household's current incomes from various sources reduced by prepayments on personal income tax, by tax on income from property, taxes paid by self-employed persons (including those in free professions and individual farmers) and by social security and health insurance premiums. The available income covers both income in cash and in kind, including natural consumption (consumer goods and services taken to satisfy household's needs from self-employment - in and outside farming) as well as goods and services received free of charge.

Available income consists of:

- income from hired work,
- income from private farm in agriculture,
- income from self-employment other than in private farm in agriculture and income from practising free profession,
- income from property,
- income from rental of a property,
- social insurance benefits,
- other benefits,
- other incomes (including gifts and alimonies).

Expenditures on consumer goods and services are allocated to satisfying household's needs. They include products purchased by cash, also using debt or credit card, on credit, received free of charge and natural consumption (consumer goods and services taken from individual farm or own economic activity to satisfy household's needs). Consumer goods comprise non-durable goods (e.g. food, beverages or medicines), semi-durable goods (e.g. clothes, books, toys) and durable goods (e.g. cars, washing machines, refrigerators, television sets).

Other expenditures include:

- gifts donated to other households and non-commercial institutions;
- certain taxes, such as tax on legacy and donations, tax on real estates, fees for perpetual use of the land;
- prepayments of personal income tax and social security contributions paid directly by the tax payer;
- other kinds of expenditures not allocated directly to consumption, including sums lost in gambling and lotteries, losses of cash and bails.

Data source	Statistics Poland
Data availability	Annual data; since 2010
Notes	Data for 2021-2023 were generalized on the basis of the results of the National Population and Housing Census 2021, taking additionally into account the structure of the population by age and gender, and are not directly comparable with the data for previous years. Due to the updated generalization, the results for 2021-2022 differ from those published previously.
