Statistics for the SDGs - indicators for national priorities

Name of the indicator	**13.3.c Total emissions of major air pollutants from households**
Sustainable Development Goal	Goal 13. Climate action
Priority	Enhancement of the role of adaptation to climate change as a means of combating climate change equivalent to mitigation
Definition	Total emissions of the six main air pollutants from households
Unit	thous. tonnes
Available dimentions	total
Methodological explanations	" **Emission of air pollutants** - Release of dust and gaseous pollutants into the atmosphere in the organized (through stationary point-sources) or unorganized manner (from dumps, landfills, during reloading of loose or volatile substances, through roof and window ventilation, due to forest fires, etc.). Total emission of main air pollutants from households includes: • Sulphur dioxide • Nitrogen oxides • Carbon oxide • Volatile nonmethane organic compounds • Ammonia • Particulates (as Total Suspended Particulates) "
Data source	National Administration of the Emissions Trading Scheme
Data availability	Annual data, since 2010
