

## Statistics for the SDGs - indicators for national priorities

Goal 6. Clear water and sanitation	ame of the indicator
Priority implementation of water efficiency technologies as well as development and modernization of wastewater treatment plants  The share of population connected to wastewater treatment plants in total population.  Unit  percent [%]  Available dimentions  Data on urban and rural population connected to wastewater treatment plants are presented on a basis of a number of people served by wastewater treatment plants operating within a sewage network.  Estimation of population served by wastewater treatment plants is done on the basis contracts on sewerage, number of connections to sewage network, data on people us wastewater treatment plants gathered from housing cooperatives or data from planne wastewater treatment plants. Estimated number of population served by wastewater treatment plants cannot be higher than the number of people living in a given place (a of 20 June of reporting period).
