

## Statistics for the SDGs - global indicators

Name of the indicator	3.7.1 Percentage of women of reproductive age (aged 15-49 years) who have their need for family planning satisfied with modern methods
Sustainable Development Goal	Goal 3. Good health and well-being
Target	3.7 By 2030, ensure universal access to sexual and reproductive health-care services, including for family planning, information and education, and the integration of reproductive health into national strategies and programmes
Definition	The percentage of women of reproductive age (15-49 years) who have their need for family planning satisfied with modern methods.
Unit	percent [%]
Available dimensions	total
Methodological explanations	The indicator is calculated on the basis of information obtained from the <b>European Health Interview Survey</b> (EHIS). This study covers persons aged 15 and more in households living in the territory of the country.  The data concern the proportion of women at the reproductive age (15-49 years) who have sexually cohabited and declared using at least one modern method of contraception ie use of a condom, contraceptive pill, other hormonal agents (e.g. plasters, sprays) and mechanical, etc.
Data source	Statistics Poland
Data availability	Data every 5 years 2009, 2014.
