

Statistics for the SDGs - indicators for national priorities

Name of the indicator	11.1.e Transport of passengers per 1 inhabitant of urban areas
Sustainable Development Goal	Goal 11. Sustainable cities and communities
Priority	Enhancement of cities and urbanised areas' capability for sustainable development and workplace creation as well as improvement of quality of life of their inhabitants by taking into account the need to increase green areas, water areas and ventilation corridors in urban development plans
Definition	The ratio of the number of passenger transport by public transport to the number of population in the cities.
Unit	persons
Available dimensions	total
Methodological explanations	Transport of passengers by public transport is the sum of passengers transported by public transport, generally accessible to the public, i.e. buses, trams and trolleybuses. A single pass is considered a transported passenger by public transport. The number of passengers is estimated on the basis of the number of one-off and multi-trip tickets sold, taking into account the standards for the number of journeys for a given multi-pass ticket accepted by public transport establishments. Data refer to enterprises and municipal transport companies employing more than 9 people. Data on residents of urban areas were taken from statistical information on the number of population in cities according to the actual place of residence.
Data source	Ministry of Infrastructure
Data availability	Annual data; since 2010
