

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	14.C.3 Passenger traffic in seaports (domestic)
Sustainable Development Goal	Goal 14. Life below water
Priority	Strengthening the position of Polish sea ports, increasing the competitiveness of maritime transport and ensuring maritime safety
Definition	Number of passengers who started and ended their sea journey in ports located in territory of Poland, traveling on passenger ships, cargo ships and ferries in domestic traffic.
Unit	persons
Available dimensions	by passenger traffic
Methodological explanations	Domestic passenger traffic in seaports – the number of passengers for whom both the port of departure and the port of arrival of the sea voyage is located in Poland, including journeys made on passenger ships, cargo ships and ferries within domestic ports. Passenger transport by maritime transport fleet – passengers transported with both paid and free tickets in international transport (from Polish ports to foreign ports, from foreign ports to Polish ports, between foreign ports, and passenger transport on round-trip cruises to foreign ports), as well as passenger transport between Polish ports (when both the port of embarkation and the port of destination are Polish ports). Seaport – an economic facility located at the interface between land and sea, appropriately equipped in technical, technological, and organizational terms to handle maritime trade, as well as the maritime and land transport means involved in their transport.
