

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	2.E.1 Expenditures on R&D in the corporate sector in food production
Sustainable Development Goal	Goal 2. Zero hunger
Priority	Research and development in food production and agriculture
Definition	Expenditures on research and development activities in the corporate sector in food production.
Unit	thous. PLN
Available dimensions	total
Methodological explanations	Research and development (R&D) is creative work undertaken methodically to increase the stock of knowledge - including knowledge of mankind, culture and society - and to create new applications for existing knowledge. Internal R&D expenditures are all current expenditures and gross capital expenditures on fixed assets related to R&D activities carried out in a statistical unit during a given reporting period, regardless of the source of financing. Food production includes the processing of agricultural, forestry, hunting and fishing products into food and beverages for humans or animals.¹ Manufacturing activities involve the physical or chemical processing of raw materials, materials or semi-finished products into a new product.
