

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	9.C.1 Length of public roads with hard improved surface per 10 thous. inhabitants
Sustainable Development Goal	Goal 9. Industry, innovation and infrastructure
Priority	Strengthening the availability of transport infrastructure and the coherence of public communication in the region
Definition	Length of public roads with hard surfaces per 10,000 inhabitants.
Unit	km
Available dimensions	total
Methodological explanations	The basis for calculating the indicator is the total length of public roads with a hard surface as of 31 December. Public roads are roads that can be used by anyone in accordance with their intended use, with an appropriate category established in accordance with the provisions of the Act of 21 March 1985 on public roads (consolidated text Journal of Laws 2015 item 460). Due to their functions in the road network, public roads are divided into the following categories: Roads with an improved hard surface include roads with a surface made of stone cubes, clinker, concrete, stone-concrete slabs and bitumen.
