

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	14.C.1 Share of the voivodship in cargo traffic in seaports
Sustainable Development Goal	Goal 14. Life below water
Priority	Strengthening the position of Polish sea ports, increasing the competitiveness of maritime transport and ensuring maritime safety
Definition	Percentage share of the voivodeship in the total cargo turnover of seaports in Poland.
Unit	percent
Available dimensions	total
Methodological explanations	Cargo turnover in seaports – the total amount of cargo moved through a port in a given period of time, either imported or exported by ships, when the transport is performed entirely or partially by sea; it includes international maritime traffic and domestic maritime traffic. Seaport – a commercial facility located at the interface between land and sea, appropriately equipped technically, technologically, and organizationally to handle trade carried out by sea, as well as to handle the sea and land transport means involved in their transportation.
Data source	Statistics Poland
Data availability	Annual data, since 2010
