

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	3.E.5 Number of influenza cases and suspected influenza cases per 100 population
Sustainable Development Goal	Goal 3. Good health and well-being
Priority	Development of health prevention and rehabilitation and health promotion
Definition	Influenza cases and suspected influenza cases per 100 inhabitants.
Unit	persons
Available dimensions	total
Methodological explanations	Morbidity is the frequency of new cases of a disease in the studied population. Influenza is an acute infectious disease of the respiratory system caused by infection with the influenza virus. Influenza is transmitted between people by droplets (for example, when sneezing), and the highest number of cases occurs during seasonal epidemics, causing acute symptoms that prevent professionally active people from working.
Data source	Statistics Poland
Data availability	Annual data, since 2010
