| Methodological explanations  | <p>The indicator reflects the <b>level of limitations in access</b> to medical examination and treatment, <b>excluding</b> unmet needs in the area of <b>dental care</b>.</p> <p>The <b>data used</b> to calculate the indicator are derived <b>from</b> the European Union Statistics on Income and Living Conditions (<b>EU-SILC</b>). They cover persons aged 16 years and over living in private households and refer to needs arising during the 12 months preceding the interview.</p> <p>The <b>indicator</b> is expressed <b>as the percentage of persons</b> who reported an unmet need for medical examination or treatment due to one of the following three reasons: financial reasons, waiting list, or too far to travel.</p> <p>The concept of <b>unmet need</b> for medical examination or medical care is based on the <b>respondent's own assessment</b> of whether they required medical examination or treatment but did not receive it or did not seek it.</p> <p>Medical <b>examination and treatment</b> refer to <b>individual health care services</b> (medical examination or treatment, excluding dental care) provided by or under the direct supervision of <b>medical doctors</b>, or by <b>equivalent healthcare professionals</b> as defined within national health care systems.</p> |
