

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	1.G.2 Percentage of residential buildings connected to the sewage system
Sustainable Development Goal	Goal 1. No poverty
Priority	Providing housing conditions for the most vulnerable and socially needy groups
Definition	Share of residential buildings connected to the sewage system in the total number of residential buildings.
Unit	percent
Available dimensions	total/urban area/rural area
Methodological explanations	A residential building is a building structure where at least half of the total usable area is used for residential purposes. In cases where less than half of the total usable area is used for residential purposes, such a building is classified as non-residential, in accordance with its intended use. Sewerage is a complex of sewage facilities: sewage networks, outlets of devices used to introduce sewage into water or the ground, and devices for pre-treatment and purification of sewage, as well as sewage pumping stations.
Data source	Statistics Poland
Data availability	Annual data, since 2015
