

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	15.B.2 Share of the population using sewerage systems in the total population
Sustainable Development Goal	Goal 15. Life on land
Priority	Modernization and expansion of sewage treatment plants and systems, as well as air protection (elimination of sources of pollutant emissions or reduction of their impact) in the regions
Definition	Share of the population living in buildings connected to the sewage network in the total population (as of 31 December of the surveyed year).
Unit	percent
Available dimensions	total
Methodological explanations	Sewage system - the complete sewage collection, treatment and disposal system: sewage networks, outlets of devices used to emit sludge into the waters or to the ground, sewage pretreatment facilities and sewage treatment plants, and sewage pumping stations. Population using sewerage system - population living in residential buildings and collective accommodation facilities connected to a sewage system.
Data source	Statistics Poland
Data availability	Annual data, since 2010
