

Statistics for the SDGs - indicators for national priorities

Name of the indicator	10.4.b Employment rate of disabled persons aged 16-64
Sustainable Development Goal	Goal 10. Reduce inequalities
Priority	Ensuring social and economic inclusion and accessibility for people with disabilities, including reducing barriers to access to infrastructure
Definition	Share of employed disabled persons aged 16-64 in the total number of disabled persons at this age (in %), average data for the year.
Unit	percent [%]
Available dimensions	total
Methodological explanations	The data comes from the representative Labour Force Survey (LFS), conducted on a quarterly basis using the continuous observation method (moving week of the survey), allowing to illustrate the labour market situation over the entire quarter. The survey covers persons aged 15-89 who are members of households in drawn dwellings. Outside the scope of the survey, there are members of households staying (the total duration of actual and planned stay is taken into account) 12 months or more abroad and in collective households (such as staff hotels, dormitories, boarding schools, nursing homes, etc.) and homeless persons. In the context of economic activity – work is the main criterion in dividing the population, i.e. performing, holding or seeking work. According to the international standards, the three main categories are distinguished: employed, unemployed and economically inactive persons. The employed, unemployed are the economically active population. Among the employed are included all persons aged 15-89 years who during the reference week: 1) performed for at least 1 hour an income-generating or earning job, i.e., were employed by a public company/institution or private employer, worked on their own (or leased) agricultural farm or conducted their own economic activity outside agriculture, assisted (without pay) in running a family farm or family economic activity outside agriculture, 2) had work, but did not perform it: • due to sickness, vacation, parenthood-related leave (maternity leave, paternity or parental leave), working time arrangement (work system or compensation for overtime hours), training related to the performed work, • due to the seasonal nature of work, if they still regularly performed off-season work or business-related tasks and responsibilities (excluding legal or administrative obligations), • for other reasons, if the expected period of absence from work does not exceed 3 months. According to international standards, among employees are also included persons performing outwork and apprentices with whom enterprises or natural persons signed a contract for occupational training or learning skills for a particular job (if they receive a payment). Among the employed are not included: volunteers and unpaid interns, persons employed in private agriculture who produce agricultural exclusively or primarily for their own use. Population of disabled persons was legally separated from the total population aged 16

Statistics for the SDGs - indicators for national priorities

	-89, based on the legal criterion. Persons with disabilities include persons who are 16 years of age and in accordance with the provisions of the Act of 27 August 1997 on vocational and social rehabilitation and employment of disabled persons (Journal of Laws of 2016, item 2046, as amended). d.) have a disability degree certificate or an equivalent certificate: • significant degree of disability - this includes persons with the 1st disability group, or a certificate of total inability to work and live independently, or a certificate of permanent or long-term incapacity to work on a farm with the right to a care allowance, • moderate degree of disability - this includes people with disability group II or a certificate of total inability to work, • slight degree of disability - this includes persons with disability group III, or a certificate of partial inability to work and the advisability of retraining, or a certificate of permanent or long-term incapacity to work on a farm without entitlement to care allowance.
Data source	Statistics Poland
Data availability	Annual data, since 2010
Notes	From 2023 onwards, data on Poland's resident population living in dwellings, derived from balance sheets compiled on the basis of Census 2021 results, were used to generalise the LFS results to the general population. Data for 2021-2022 were compiled according to the new basis of generalisation. Due to the changes introduced, the LFS results are not fully comparable with the survey results for the years prior to 2021. In addition, the lack of comparability of the data time series is also affected by methodological changes introduced to the LFS from Q1 2021. Data for 2010-2020 have been recalculated and presented taking into account the new methodology. These recalculations do not take into account the change in the basis for generalising data to balances based on the Census 2021.
