

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	14.A.5 Landings of marine fish and shellfish in Polish ports
Sustainable Development Goal	Goal 14. Life below water
Priority	
Definition	The volume of landings of marine fish and invertebrates in Polish ports.
Unit	tonnes
Available dimensions	total
Methodological explanations	Landings – quantities of fishery products landed on Polish territory by Community and EFTA fishing vessels. Data are collected regardless of the fleet's registration location, pursuant to Regulation (EC) No. 1921/2006. Seaport – an economic facility located at the interface between land and sea, appropriately equipped technically, technologically, and organizationally to handle maritime trade, as well as to handle the maritime and land transport means involved in their transportation. Marine fish – a group encompassing fish species caught in marine waters, including the Baltic Sea and its bays, regardless of their biological origin, including: • freshwater fish – species that spend their entire lives in freshwater, also caught in the Baltic Sea and its bays (the Vistula Lagoon, Szczecin Lagoon); this group includes: gobies, vimba, tusk, ruff, Siberian sturgeons, crucian carps, carps, silver breams, breams, tenches, burbot, perch, roach, pike, pike-perch, catfish, smelt, pike, and eelpout, • diadromous fish – species that change habitat between marine and inland waters during their lifespan; This group includes: salmon, rainbow trout, whitefish, sea trout, and eels, • other marine fish – other species of typical marine fish; this group includes, among others: Atlantic herring, barracuda, sandeel, dentex, blue ling, mackerel, black scabbardfish, whiting, plaice, tuna, catfish, and yellowtail. Invertebrates – this group includes mollusks (including squid and members of the family cuttlefish) and crustaceans (crabs, shrimp).
Data source	National Marine Fisheries / Statistics Poland
Data availability	Annual data, since 2011
