

## Statistics for the SDGs - indicators for regional priorities

|                                     |                                                                                                                                                                                                                                                             |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Name of the indicator</b>        | <b>3.E.3 Healthy Life Years — males</b>                                                                                                                                                                                                                     |
| <b>Sustainable Development Goal</b> | Goal 3. Good health and well-being                                                                                                                                                                                                                          |
| <b>Priority</b>                     |                                                                                                                                                                                                                                                             |
| <b>Definition</b>                   | Expected years of life in health is a coefficient reflecting the health situation of the population, calculated on the basis of life tables and individually and subjectively perceived disability.                                                         |
| <b>Unit</b>                         | "_"                                                                                                                                                                                                                                                         |
| <b>Available dimensions</b>         | total                                                                                                                                                                                                                                                       |
| <b>Methodological explanations</b>  | The indicator is interpreted as the expected average number of years that a person aged x completed years will expect to live without disability, provided that current conditions of mortality and health of the population remain at their current level. |
