

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	3.F.3 Emission of gaseous pollutants per thousand inhabitants
Sustainable Development Goal	Goal 3. Good health and well-being
Priority	
Definition	Emissions of gaseous pollutants per thousand inhabitants.
Unit	t/year
Available dimensions	total
Methodological explanations	Emission of gaseous substances into the atmosphere, the concentration of which exceeds the average content of these substances in clean air, negatively affecting human health and the condition and quality of the environment. Characteristic air pollutants occurring in gaseous form include: sulfur dioxide (SO₂), nitrogen oxides (NO_x), carbon monoxide (CO), carbon dioxide (CO₂), hydrocarbons (C_nH_m) and so-called "oxidants". Oxidants are secondary pollutants, created through photochemical reactions of basic pollutants. They include ozone, nitrogen dioxide, formaldehyde, acrolein and others.
Data source	Statistics Poland
Data availability	Annual data, since 2010
