

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	8.A.3 Share of industrial enterprises incurring expenditure on innovation activities - enterprises employing 10 employees or more
Sustainable Development Goal	Goal 8. Decent work and economic growth
Priority	Effective use of the economic potential of the region based on innovation and responsible economic growth
Definition	Share of industrial enterprises that have incurred expenditure on innovation activities with 10 persons employed and more in the total number of enterprises employing 10 employees or more.
Unit	percent
Available dimensions	total
Methodological explanations	The data concern refer to industrial enterprises, i.e. those whose main activity is classified in one of the 4 sections of the NACE Classification 2007 classification: B – Mining and quarrying, C – manufacturing, D – Electricity, gas, steam, and air conditioning supply E – Water supply; sewerage and waste management and remediation activities. Innovation activities is the totality of scientific, technical, organizational, financial and commercial activities that lead or are intended to lead to the implementation of innovation. Some of these actions are innovative, while others are not new, but necessary to implement innovation. Innovation activities also include research and experimental development (R&D) activities that are not directly linked to the creation of a specific innovation. An innovative undertaking is an undertaking that in a given reporting period carried out product or process innovation activities or carried out at least one innovative project (product or process) during that period that was discontinued or abandoned during the period considered (not successfully completed) or was not completed by the end of that period (i.e. continued). The Innovation Survey is based on an international methodology (Oslo Manual). Financial outlays incurred for innovative activities in the field of product and process innovation include outlays on: The innovation survey takes into account all expenditure on current and investment product and process innovations incurred in the reporting year for works that were successful (i.e. implementation of the innovation), not completed (continued) and discontinued or abandoned, regardless of the sources of their financing.
Data source	Statistics Poland
Data availability	Annual data, since 2010
Notes	The data comes from a survey of the innovative activity of enterprises. It covers industrial enterprises of sections B, C, D, E of the NACE Classification 2007, where 10 or more people work. The survey is carried out on the full population of enterprises with 50 or more employees and on a sample of other enterprises of 25% of the population (except in 2010 when the survey was carried out on the full population). Due to changes in the Programme of statistical surveys of official statistics, the survey of innovative activities of enterprises changed the frequency to two years. Data from 2022 onwards will always be available in even years.
