

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	9.A.4 Share of enterprises in the service sector that cooperated in terms of innovation activity in total number of enterprises
Sustainable Development Goal	Goal 9. Industry, innovation and infrastructure
Priority	Increased competitiveness of the region by increasing the research and innovation potential (Development of institutional potential for research and development, supporting cooperation between the research sector and the economy)
Definition	Percentage ratio of service sector enterprises employing 10 or more people cooperating in the field of innovation activities to all service sector enterprises.
Unit	percent
Available dimensions	total
Methodological explanations	Innovative enterprises from the service sector are enterprises that introduced at least one product innovation in business processes (new or improved product or new or improved business process) to the market in the period under review - until 2018 - process innovation (new or significantly improved product or new or significantly improved process). Cooperation in the field of innovation activity means active participation in joint projects concerning innovation activity with other enterprises or non-commercial institutions. Such cooperation may be prospective and long-term in nature and does not have to entail direct, measurable economic benefits for the participating partners. Simply ordering work from external contractors, without active participation in their implementation, should not be considered cooperation in the field of innovation activity.
Data source	Statistics Poland
Data availability	Annual data, since 2008; since 2022 data in two-year cycles
