

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	3.E.7 Number of hepatitis C cases per 100 thous. population
Sustainable Development Goal	Goal 3. Good health and well-being
Priority	
Definition	Hepatitis C cases per 100,000 population.
Unit	persons
Available dimensions	total
Methodological explanations	Morbidity is the frequency of new cases of a disease in a studied population. Hepatitis C is an infectious disease caused by the Hepatitis C Virus (HCV). The HCV virus is found in the blood and other tissues of an infected person. Infection occurs through contact with infected blood in the event of a break in the continuity of the tissues, e.g. a puncture, a cut in the skin or mucous membrane, or contact with objects that have been contaminated with infected blood.
Data source	Statistics Poland
Data availability	Annual data, since 2010
