

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	9.C.6 Percentage of buses adjusted to carrying the disabled persons in urban transport
Sustainable Development Goal	Goal 9. Industry, innovation and infrastructure
Priority	
Definition	Percentage ratio of the number of buses adapted to transport disabled people to the total number of buses in public transport (as of December 31).
Unit	percent
Available dimensions	total
Methodological explanations	Bus adapted for the transport of disabled persons - in accordance with Regulation No. 107 of the UN ECE (OJ EU L 153 of 18.06.2015 - Uniform provisions concerning the approval of vehicles of category M2 or M3 with regard to their general construction) all single-deck, double-deck, rigid or articulated vehicles must allow access for people with reduced mobility, including at least one wheelchair user, as well as doors with a lift or ramp providing access for people using wheelchairs. The data concerns bus transport (including express buses) in cities - including the service of suburban and intercity traffic remaining in the hands of public transport companies and private companies serving certain cities or specific lines. The data comes from the statistical report T-06 report on passenger road transport and covers the rolling stock of entities conducting municipal passenger transport in the scope of urban transport, including the service of suburban areas (full observation method).
Data source	Statistics Poland
