

Statistics for the SDGs - global indicators

Name of the indicator	3.7.1 Percentage of women of reproductive age (aged 15-49 years) who have their need for family planning satisfied with modern methods
Sustainable Development Goal	Goal 3. Good health and well-being
Target	3.7 By 2030, ensure universal access to sexual and reproductive health-care services, including for family planning, information and education, and the integration of reproductive health into national strategies and programmes
Definition	The percentage of women of reproductive age (15-49 years) who have their need for family planning satisfied with modern methods.
Unit	percent [%]
Available dimensions	total
Methodological explanations	The indicator is calculated on the basis of information obtained from the European Health Interview Survey (EHIS). This study covers persons aged 15 and more in households living in the territory of the country. The data concern the proportion of women at the reproductive age (15-49 years) who have sexually cohabited and declared using at least one modern method of contraception ie use of a condom, contraceptive pill, other hormonal agents (e.g. plasters, sprays) and mechanical, etc.
Data source	Statistics Poland
Data availability	Data every 5 years 2009, 2014.
