

Statistics for the SDGs - indicators for regional priorities

Name of the indicator	6.D.5 Percentage of population connected to wastewater treatment plants
Sustainable Development Goal	Goal 6. Clean water and sanitation
Priority	Development of water and sewage infrastructure
Definition	The share of population connected to wastewater treatment plants in total population.
Unit	percent
Available dimensions	total, urban, rural
Methodological explanations	Data on urban and rural population connected to wastewater treatment plants are presented on a basis of a number of people served by wastewater treatment plants operating within a sewage network. Estimation of population served by wastewater treatment plants is done on the basis of contracts on sewerage, number of connections to sewage network, data on people using wastewater treatment plants gathered from housing cooperatives or data from planned wastewater treatment plants. Estimated number of population served by wastewater treatment plants cannot be higher than the number of people living in a given place (as of 20 June of reporting period). Estimated number of population served by wastewater treatment plants does not include people temporary staying in a given place (e.g. tourists).
Data source	Statistics Poland
Data availability	Annual data, since 2010
